(1) Number of ASi networks, number of ASi Master  
 "Single Master": 2 ASi networks, 1 ASi-3 Master.

(2) Integrated decoupling, ASi current measurement in the gateway  
 "no, max. 8 A/ASi network, redundant supply": 1 ASi power supply per ASi network. Gateway is powered in normal operation from one of the two ASi power supplies. Should one ASi power supply fail, switching to the other ASi power supply allows all the diagnostics functions to be maintained and the unaffected ASi network continues to operate.
