

AS-Interface Master News (04/2024)

Less connectors – More connection

Children often make a lot out of a little. Two cans, one cord, plenty of pioneering spirit – and the communication miracle is complete. Less is also more with **AS-Interface (ASi)**: the extremely simple fieldbus/wiring system scores with less connectors, **less resource consumption**, less costs and less installation effort thanks to innovative piercing technology.

Do you want more?

ASi offers you more connection, more ease of use (e.g. with IO-Link integration) and more freedom in the choice of topology. More application options are the big plus of **ASi-5**, the latest AS-Interface generation – made possible by the high data width and short cycle times.

Would you like to know more?

On our website, we answer important questions about AS-Interface:

- **Why do I need almost no connectors with ASi** – while larger systems with Ethernet solutions often require several hundred connectors?
- **Why is ASi a cost-effective wiring system** – which can reduce wiring costs by up to 68%?
- **Why is ASi a resource-saving technology** – which requires less cable, plastic and copper and even helps you save electricity?
