

AS-Interface Master News (06/2023)

The New 8-Port IO-Link Master Pushes Boundaries

The latest 8-Port IO-Link master ([BWU4386](#)) now allows **several hundred IO-Link devices** to be integrated into **a single ASi circuit**. The ASi-5 module also offers a high degree of flexibility. This is because **1 to 32 bytes of process data and 1 byte of PQI diagnostics** can be freely configured for each of the 8 IO-Link Class A Ports. The 16 digital inputs/outputs also enable each M12 socket to be used either for IO-Link or for binary sensors and actuators.

Comprehensive Software Update

The latest update of [ASIMON360](#) or [ASi Control Tools360](#) impresses with its significantly improved and simplified functionality during configuration and commissioning. You can **automatically commission** spare parts while benefiting from **additional diagnostic data**. Use the full diagnostic scope of the IO-Link devices up to the cloud or control with [ASi-5](#).

The new 8-Port IO-Link master ([BWU4386](#)) is Bihl+Wiedemann's most cost-effective solution per port – partly thanks to the simple ASi connection technology.

Advantages of the ASi-5 Module with integrated IO-Link Master with 8 Ports

- Byte-precision configuration with up to 32 bytes and PQI process data per Port
- The most cost-effective IO-Link integration per IO-Link Master Port
- Having several hundred IO-Link devices per Master additionally reduces costs
- Simultaneous, convenient parameterization and commissioning of hundreds of IO-Link devices
- Simplest possible wiring and assembly thanks to ASi piercing technology
