

The Modern ASi-5/ASi-3 Address Programming Device for all ASi Generations

Count on a **powerful combination** when commissioning your ASi system: by using the new compact **ASi-5/ASi-3 address programming device** (BW4708) together with the Bihl+Wiedemann Software Suite, you combine the advantages of decentralized addressing with those of centralized planning and parameterization.

Advantages of the ASi-5/ASi-3 Address Programming Device

- **For all ASi generations** – You can commission all ASi-3 and ASi-5 modules easily and safely with a uniform workflow. BW4708 is also clearly the most powerful ASi-3 address programming device.
- **All Bihl+Wiedemann PC programs can be used**– By connecting the address programming device to a PC via the USB interface, you can use it together with the Bihl+Wiedemann Suite.
- **Operator-friendly** – Thanks to six robust buttons and an OLED color display, you can easily operate the address programming device. Firmware updates can be performed in the field without any problems.
- **Always ready for use** – A modern energy storage device (supercapacitor) offers a long service life and enables fast charging even during simultaneous use (fully charged in approx. 30 minutes, sufficient for ≥120 read/write operations).

Fig.: The most important ASI addressing cables (BW4711, BW4712, BW4731) are already included in the delivery – as is the power supply via USB-A to USB-C charging cable (BW4713).
