

Configuring AS-i circuits is child's play – with ASi Control Tools360

Bihl+Wiedemann has further refined its configuration software **ASi Control Tools: Addressing, configuration and commissioning of non-safety hardware is now even easier** with ASi Control Tools360.

Integrated hardware catalogue

Just like our ASIMON360 safety software, ASi Control Tools360 now also includes an **integrated hardware catalogue** with the entire product range of Bihl+Wiedemann. All you need to do is to **click on the corresponding device** when configuring the AS-i circuit, its settings will open automatically.

Online bus information

The new **online bus information** also enables you to address slaves easily and to monitor live inputs and outputs. This function additionally makes it **even easier to integrate IO-Linksensors into your AS-i network, by allowing you to parametrize them easily**.

ASi Control Tools360 at a glance

- Hardware catalogue for simple product configuration
- Commissioning assistant guides you step by step through addressing
- User catalogue to create your own templates
- Easy connection to the IO-Link configuration tool
- Simplified AS-i circuit diagnostics: Errors can be identified at a glance thanks to easy-to-understand symbols; with precise description and concrete hints for rectification
- Helps you diagnose inputs, set outputs and perform live modifications to parameters
- ASi Control Tools360 are included in the software package BW2902. We recommend ASIMON360 for safety applications: ASi Control Tools360 are fully integrated into our safety software. ASIMON360 is included in the software packages BW2916 and BW3065.
