

ASi-5 Safety launches input modules with safe and non-safe signals

ASi-5 Safety is now certified and ready for use and will optimally complement the **established ASi Safety line in the future**. The latest Safety generation can be **easily integrated into existing solutions**. Main advantage of ASi-5 Safety: You can use **many safe and non-safe signals under just one single address**: BWU4209 has 2 inputs for potential-free contacts, BWU4210 has 2 inputs for optoelectronic protective devices. Both items will be available from the beginning of 2022.

With the ASi-5 Safety input modules allow you to connect an operating panel to ASi cost-effectively – with several illuminated pushbuttons, an E-stop button and a safe key switch.

Advantages of the new ASi-5 Safety input modules

- **Full Compatibility** – ASi-5 Safety is compatible with all previous ASi devices and components and can be easily integrated into existing solutions.
- **Only one node number** – ASi-5 Safety allows many safe and non-safe signals to be used under just one address.

- **Reduced machine-related costs** – The ASi-5 Safety module with 2 safe inputs are similarly priced to ASi-5 modules with just standard I/Os.
